Colour Profiles

Océ develops high-quality colour profiles for media / ink / printer / RIP combinations. Check availability of profiles for your printer on the download section of <u>www.oce.com</u>.

Processing Guidelines

Lamination guidelines Excellent reverse side adhesion for mounting and encapsulation applications. Encapsulation is recommended. One-sided lamination may cause curl.

Printing guidelines

Allow material to adapt to room conditions for 24 hours before printing.

The use of dye inks (e.g. Océ GC, Encad GX) can lead to premature fading of magenta.

This paper is developed to handle considerable inkloads, however inkloads above 240% and large composite black areas are not recommended.

Application guidelines

Although the material was not specifically designed for outdoor applications, it shows considerable water resistance when compared to other premium coated papers. SmartMatt can be used for short-term outdoor applications (max 2 weeks) with outdoor/pigmented inks. When using outdoor/pigmented inks, however, some loss of colour strength may be expected.

Lamination will extend the period of time.
